

Cover Photo: Following reintroduction of fire to ponderosa pine forests in the Cedar Grove area of Kings Canyon National Park, California, USA, burns have been invaded by the alien grass *Bromus tectorum* (cheatgrass). Fire restoration appears to have favored this alien invasion, and therefore the National Park Service has indefinitely halted prescription burning in these forests. The photograph was taken by Jon Keeley as part of the article, "Fire and grazing impacts on plant diversity and alien plant invasions in the southern Sierra Nevada," by J. Keeley, D. Lubin, and C. J. Fotheringham, to be published in *Ecological Applications* 13(5), October 2003.
